## Kupu Whakataki Introduction

The Waste Management and Minimisation Plan (the Plan) is the guiding document for achieving effective and efficient waste management and minimisation in South Taranaki District and how the Te Rautaki Para Aotearoa / New Zealand Waste Strategy will be applied to deliver a low-emissions, low-waste society built upon a circular economy.

The Waste Management and Minimisation Plan outlines how we will effectively manage and minimise waste in South Taranaki over the next six years. Our vision is 'Zero waste to Landfill 2050.' Ob page 6 we outline what a circular economy is, its drivers, and how we can link the circular approach to reducing carbon emissions.

#### Te Putake **Purpose**

The South Taranaki District Council is required by the Waste Minimisation Act 2008 to produce a Waste Management and Minimisation Plan. This Plan will be the guiding document for achieving effective and efficient waste management and minimisation in the South Taranaki District for the next six years (2023-2029).

The Plan also outlines the role we can play in contributing to Te Rautaki Para Aotearoa / New Zealand Waste Strategy roadmap for a low-emissions, low-waste society built upon a circular economy.

The Council worked with the community to develop a vision, guiding principles incorporating Te Ao Māori (Māori world view), goals, and objectives to pave the way for the future of waste. Building on the Zero Waste journey started in 2017, the Plan details what actions the District can take to reach our targets, and how these actions will be funded.

The Plan covers the whole South Taranaki District and reflects a regional approach to minimising waste through working with New Plymouth (NPDC) and Stratford (SDC) district councils. By undertaking a regional assessment of waste, the councils' Waste Management and Minimisation Plans have been developed together and consider regional waste data and options where applicable.

All solid waste material, whether it is landfilled or diverted, is considered in this Plan, which includes items being reused, recycled, or composted. Liquid and gas wastes that are more effectively managed through other policies are not in the scope of this Plan.

This is the third Waste Management and Minimisation Plan for South Taranaki District. Consultation on the Plan is open from 28 August 2023 to 11 October. The Plan will be formally adopted following consideration of submissions.

The Plan will be reviewed six years from the date of approval, unless reviewed in the interim.

#### Te Whai a Taranaki i tetahi Ohanga Amiomio

### Taranaki's Pathway to a Circular Economy

A **circular economy** is a system where resources and materials are used and reused for as long as possible. In the current "take-make-dispose" linear economy (Figure 1), products are not designed for reuse, repair, refurbishment or to be remanufactured and this drives the continuous disposal of valuable resources.

A circular economy is more than just about how we manage waste. It prioritises waste avoidance by thinking about the end of use from the very beginning of the product's design phase.

A circular economy continually seeks to reduce the environmental impacts of production and consumption, while supporting economic growth through more efficient use of natural resources. The circular economy is based on the following design principles:

- Eliminating waste and pollution
- Keeping products and materials in use; and
- Regenerating natural systems.

Figure 1 The linear and circular economy approaches<sup>1</sup>

<sup>&</sup>lt;sup>1</sup> Adapted from Te Rautaki Para Waste Strategy

A circular economy requires a shift, given that our current economy is based on the continuous consumption and disposal of goods for economic profit. Key drivers for the transition to a circular economy come from both opportunities and regulations (Table 1).

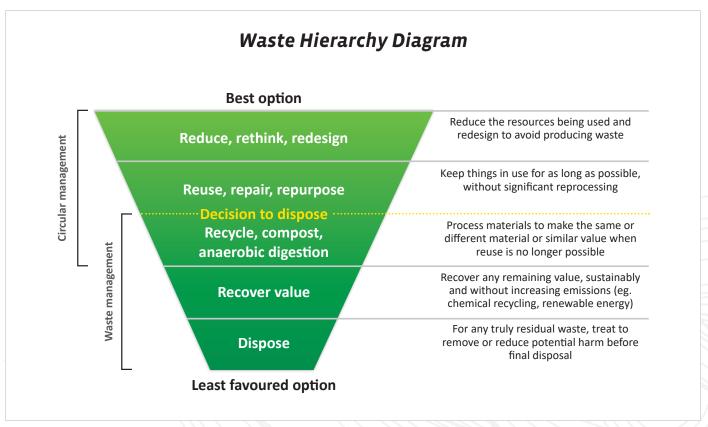

Table 1: Drivers For change

Opportunities	Economic And Regulatory Requirements
Innovation	Greenhouse gas reduction requirements
Collaboration with industry, community and other government agencies	National and regional policy
Community/local benefit	Increased waste disposal costs (landfill levy, emissions trading scheme)
Improved environmental management	Community demand for action
Exploring shared opportunity with Iwi and Hapū	Stricter environmental regulations

The waste hierarchy (Figure 2) is used as a guide to prioritise activities, focussing on circular management methods before considering disposal options. Where

there is no current market for waste material the focus is on safe treatment and disposal.

Figure 2: The Waste Hierarchy<sup>2</sup>

<sup>&</sup>lt;sup>2</sup> Sourced from Te Rautaki Para Waste Strategy

A linear economy takes raw material from the earth, then uses energy and labour to manufacture a product which is then disposed of when no longer required.

Manufacturing, consumption, and disposal generate carbon emissions. By keeping products and materials in use for as long as possible, the circular economy helps to reduce the emissions generated.

Within Taranaki, a circular economy approach that supports carbon neutrality and reflects the priorities of the waste hierarchy, could mean:

- Eliminating waste and the associated carbon and potential emissions from landfill and constructing local infrastructure and buildings.
- Influencing how we consume things (though behaviour change) will reduce waste and emissions from products we use as a community.
- Keeping products and materials in use through a robust local recovery network which will reduce emissions from transporting material elsewhere in New Zealand or internationally.
- Reusing or using recycled material where more efficient than raw material.
- Incorporating waste into natural systems. For example: organic waste recovery into compost which can be used for planting or biodiversity projects.

#### Ngā Kaupapahere, ngā Mahere me ngā Waeture

#### Policies, plans and regulations

Circular economy principles are becoming more set in policies, plans and regulations. The newly released Te Rautaki Para Waste Strategy (2023) provides direction for New Zealand waste systems from now to 2050. The Waste Minimisation Act 2008 (the Act) is one of the primary pieces of legislation affecting waste and supports the implementation of the strategy. The

Act is currently under review and South Taranaki will need to be well set up to implement these legislative changes across the waste sector.

The Waste Strategy is supported by numerous other legislation including the Emissions Reduction Plan and underpinned by local policy (Figure 3).

#### Part 2

# Tō Nāianei Pūāhua The Current Situation

This section sets out how we have progressed on our zero waste journey, including:

- our key achievements;
- how effective our current services are;
- where our waste comes from and what it is made up of;
- how well we are capturing materials for recovery.

It also considers the future demand for waste services as our population and economy change.

Tā Mātou Whai kia Parakore, ā Mohoa nei

Our zero waste journey so far

To assess how we are doing and what we need to focus on next, a Waste Assessment was completed to confirm the key drivers for change, identify gaps or issues and a possible roadmap for future actions.

Since the last Plan was developed in 2018, the region has made significant progress with its actions to divert material from landfill through education and behaviour change, collaboration and a regional resource recovery service.

In the last six years the Taranaki councils have worked together to deliver behaviour change programmes under the Zero Waste Taranaki shared education plan and continue to provide a regional approach to kerbside collection and transfer station services.

In South Taranaki district, we have:

- Begun implementing our Environment and Sustainability Strategy;
- Begun developing an energy and carbon reduction plan
- The Colson Road Regional Landfill closed (2019), and landfill;
- waste is now transported to Bonny Glen Landfill in Marton;
- Employed a Business Waste Minimisation officer to work with both businesses and the building sector;
- Undertaken public education programmes, including for schools, tertiary education providers and community organisations;
- Worked with NPDC, SDC, iwi and primary processors to develop a regional approach to recovering organic materials;
- Developed an Emissions Reduction Plan with reference to waste and circular economy actions.

Waste and resource recovery infrastructure and services are provided across the region as part of Zero Waste Taranaki. Services are provided by the three councils, contractors to the councils, private service providers and community groups. The services currently available are detailed by waste hierarchy category in Table 2.

Table 2: Summary of waste services in Taranaki

Infrastuct	Infrastucture/Service	Council Provided	Providers

	Transfer Stations	Waste disposal at all transfer stations (user pays)	<ul> <li>One private transfer station in New Plymouth</li> </ul>
	Landfill	<ul> <li>No active landfills in Taranaki region</li> <li>NPDC has 9 closed landfills</li> <li>STDC has 7 closed landfills</li> <li>SDC has 3 closed landfills</li> </ul>	• N/A

#### Kohi Para-ā-Kāinga

#### **Kerbside collections**

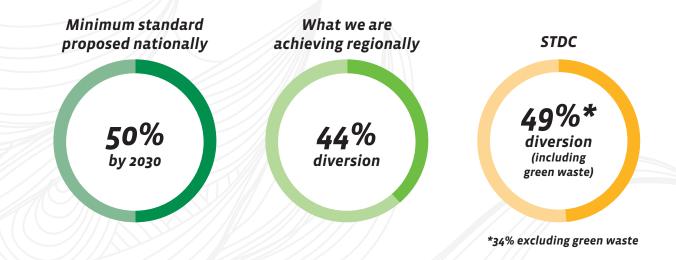

Across Taranaki, more than 22,000 tonnes of waste is collected from kerbside services (Figure 4), with 44% diverted into recycling or composting. The New Zealand Waste Strategy (Te Rautaki Para Aotearoa)

requires us to divert 50% of waste collected at kerbside through recycling or composting by 2030. We are heading in the right direction, but there is still more to do.

Figure 4: Total waste collected at kerbside regionally and in the South Taranaki District

#### Diversion of waste from kerbside

South Taranaki residents, have a weekly landfill, recycling, glass and fortnightly opt in greenwaste collection, and have considerably more waste to landfill than those in NPDC but still less than SDC (Figure 5).

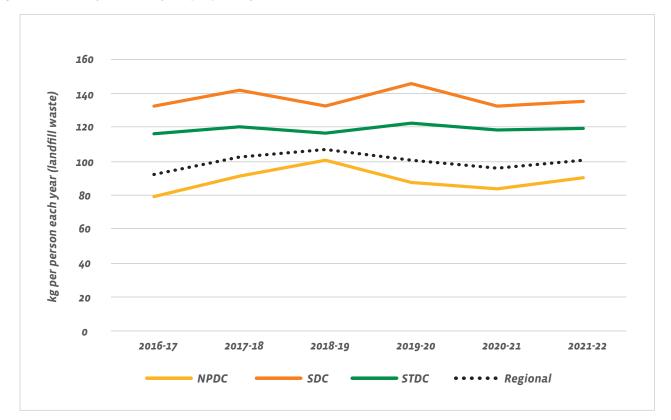

Figure 5: Amount of waste landfilled per person from kerbside collections since 2016

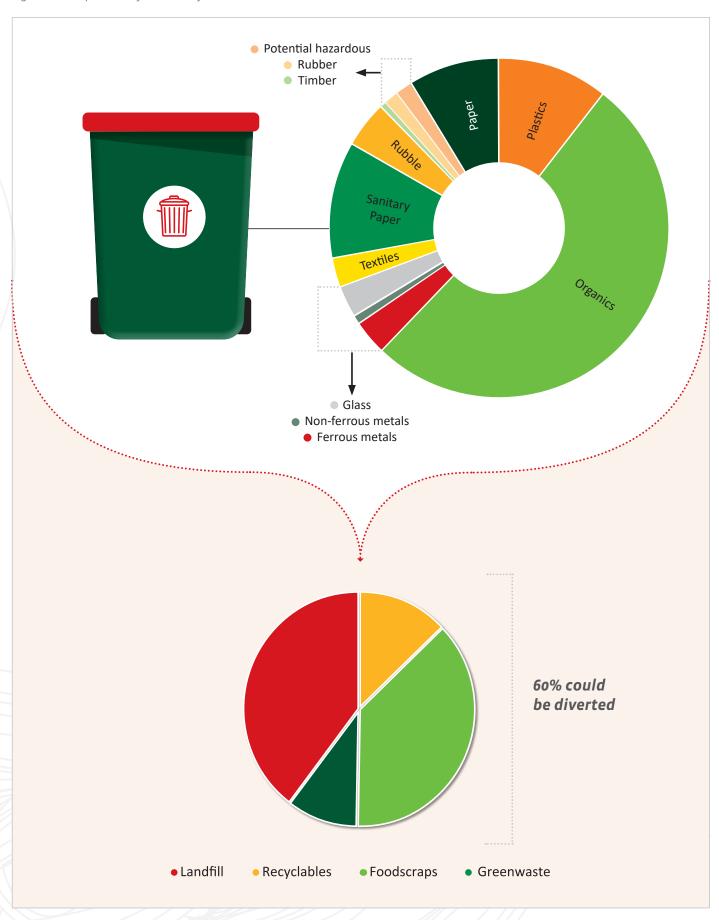

The typical contents of a landfill bin (red lid bin) indicates that while residents are using the recycling and opt in green waste bins offered through the kerbside services, there is still potential to capture more recyclable material with 60% of waste in the landfill bin that could be diverted (Figure 6). In particular, better uptake of the greenwaste collection and an introduction of the food scraps collection should help to bring this down.

A key proposal in this Plan is to increase the size of our kerbside recycling bin (to 240 litres) increase the size of our general waste bin (to 140 litres), move to fortnightly collections for these and introduce a food waste collection bin collected weekly.

The main reasons we are proposing this are:

- 1. Reduce the amount of waste going to landfill. The Government requires all Councills introduce a food waste collection by 2030. Currently about 38% of all kerbside general waste is made up of food waste. By reducing the general waste collection to fortnightly and introducing a weekly food waste collection service we could divert almost 3,000 tonnes of organic waste from landfill each year, which will in turn reduce our emissions and our costs.
- 2. To keep cost increases to a minimum. By moving to a fortnightly collection and sending less waste to landfill we can reduce the amount of Government waste levies and kerbside collection rates we will have to pay. This will reduce the anticipated cost increases on the annual kerbside rubbish and recycling targeted rate by around \$75.

Figure 6: Composition of STDC landfill bins and how much could still be diverted

Contamination of recyclables with non-recyclable items is an ongoing issue at the kerbside.

Contamination rates fluctuate but have increased over time and have never met the 8% target (Figure 7). This is due to:

- Tighter restrictions on China's acceptance of recyclable materials in 2018 resulting in mixed plastics being temporarily sent to landfill as there was no longer a recycling market for these plastics. China stopped accepting mixed paper which resulted in flooded international markets and a drop in recycling revenue; and
- Publicity and media articles around these changes highlighting how recycling is managed internationally and potentially undermining people's belief that recycling is occurring, which results in less care taken when recycling at home.

 During 2020 when COVID-19 Pandemic lockdowns were introduced, recycling and organic collections across the country (including Taranaki) were temporarily put on hold. When they were reintroduced, it took residents a while to readjust to regular recycling habits.

Since then there has been a downward trend in contamination rates, likely due to post COVID adjustments, education of residents on good recycling habits, improvements to the processing facility to detect contamination on the sorting line and auditing of kerbside bins and collection vehicles. Even with this decline, contamination rates continue to remain high.

#### Taupuni Whakawhiti Para

#### **Transfer Stations**

There are seven public transfer stations in the South Taranaki District and 13 regionally. Since 2010 there have been increasing quantities of recoverable materials (Figure 8), however the bulk of material moving through transfer stations is landfilled. As most of the transfer stations were originally designed as disposal facilities with recovery services added over time, there is an opportunity to redesign / upgrade

transfer stations to focus more on recovery and perhaps utilise these sites as part of a region wide resource recovery network.

Timber continues to be the largest component (28%) of transfer station waste that is sent to landfill, followed by plastic (15.5%), organics (12.8%), and rubble/concrete (12.3%).

Figure 8 Composition of waste at transfer stations

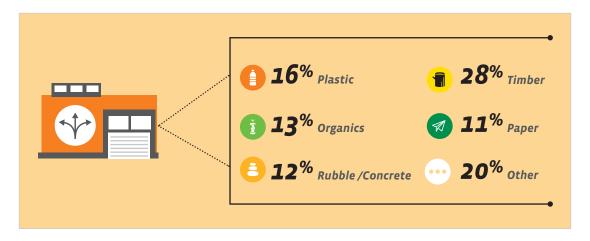

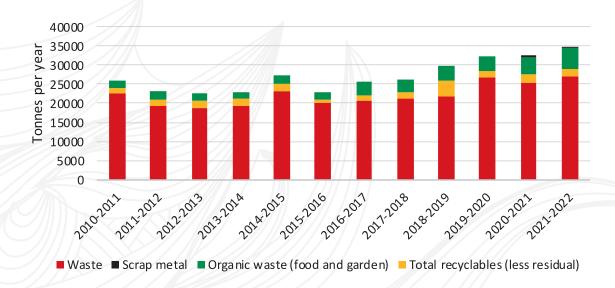

Figure 9 Regional transfer station waste and recovery (council data 2010 -2022)

#### Para katoa ki te ruapara

#### Total waste to landfill

The total waste to landfill from across the region, including both council and private waste collection and transfer station services from 2010 to 2022, is summarised in Figure 9. Overall waste to landfill in Taranaki has generally decreased since 2015/16 with a slight increase in 2021/22. Waste per person at a regional level decreased to 2020/21 with an increase in 2021/22 but overall, there is a consistent decrease in waste to landfill per person since the last plan in 2017.

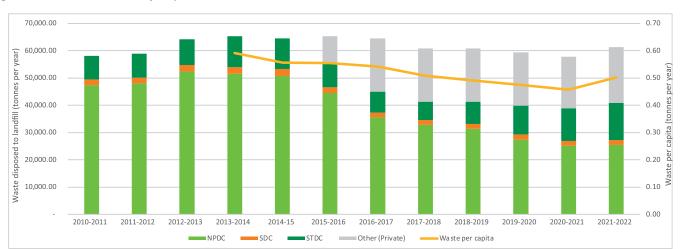

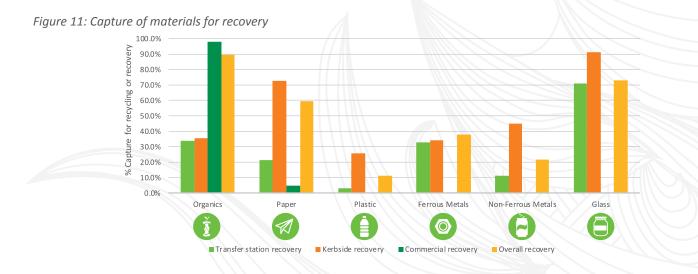

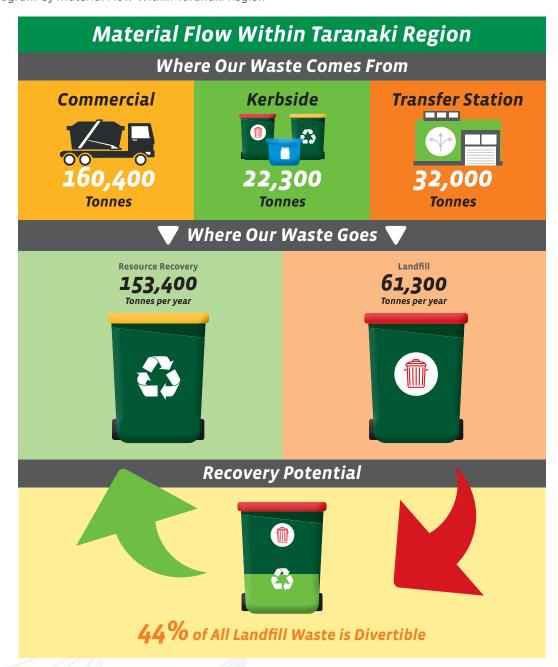

Figure 10: Total waste to landfill by district.

The waste generated in Taranaki comes from commercial and residential sources and some materials are captured through our kerbside collection and transfer stations to be reused or recycled. While some materials are recycled within Taranaki (e.g. concrete, organic material), many are recycled nationally (glass, paper and cardboard, plastics) and internationally (scrap metal). Despite the recovery infrastructure we have, there is still more that could be captured from the waste sent to landfill (Figure 10), particularly paper, plastics and glass (from transfer stations and commercial activities) and we have limited data for some waste streams, particularly rural and commercial.

Te Mahere Whakahaere me te Whakaiti Parapara | Te Kaunihera ō Taranaki ki te Tonga

Figure 12: Diagram Of Material Flow Within Taranaki Region

#### Putanga Waro mā te para Carbon emissions from waste

Carbon emissions from waste make up 4% of the District's emissions and for STDC, the latest data on emissions (financial year 2020 – 2021) indicates that waste was 24.06% of the STDC organisation emissions profile. Increasing our recovery of material from the waste stream for reuse and recycling reduces the emissions associated with waste.

#### Ngā Matapae Para mō Āpōpō

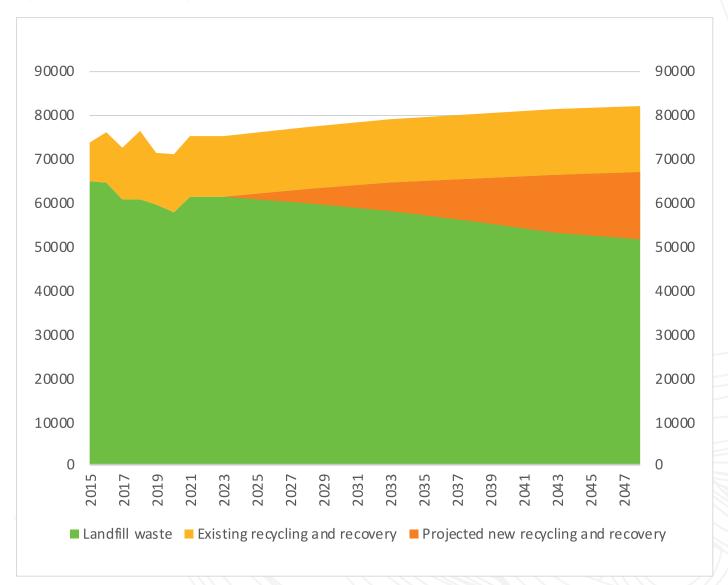

#### **Future waste projections**

The factors that have the greatest influence on potential demand for waste and resource recovery services are:

- population and household growth;
- construction and demolition activity;
- economic growth;
- changes in the collection service or recovery of materials.

If the region continues to generate the same volume of waste that is currently generated, waste generation will grow slowly to 2048 (Figure 13). Recycling of waste is also expected to increase, which will take waste out of landfills, reducing landfill emissions by 16%.

Figure 13 Forecast waste generation to 2048

#### Ā Mātou Take me ngā Arawātea Other issues and opportunities

The Waste Assessment identified the following issues and opportunities in waste management and minimisation in the District.

#### Issues

#### Collection of consistent data continues to be a challenge.

- Inconsistent reporting of emissions associated with waste services and management within the region.
- Contamination in kerbside recycling remains high.
- Illegal dumping continues to occur.

#### **Opportunities**

- Keeping materials for processing (recycling and reuse) in the Taranaki region will increase economic opportunities (jobs, materials processing, etc) but relies on sustainable markets for process outputs.
- There is considerable opportunity to increase the capture of materials (specifically paper, metals, and organic materials) for diversion.
- Planned new local infrastructure (e.g. organic material processing facility) will have an impact on the quantity of material which is recycled or recovered.
- Education and behaviour change are important to:
  - » reduce the generation of materials
  - » enhance the use of existing infrastructure
  - » improve the capture of materials for recycling and recovery
  - » address contamination in recycling.
- Further work to increase understanding of the problems associated with farm waste.

#### He Aha hei Arongā Ināianei?

#### Where do we want to focus now?

Nationally, the waste sector is going through significant change and in conjunction with addressing climate change, we need to ensure our region is well set up for success – our action plan needs to anticipate, resource and implement this change within our local context.

Achieving a circular economy cannot be done by Council alone and progress will rely on everyone taking responsibility, looking at how we can support our community and collaborate locally and nationally.

Partnering with Iwi and Hapū to identify and deliver outcomes will work towards a Te Tiriti o Waitangi approach and allow mana whenua to implement kaitiakitanga.

#### Now our focus is on:

• Enabling our communities to better use our

- existing services to reduce waste and capture more material for reuse and recycling;
- Connecting our people, community groups and commercial organisations with each other and the environment;
- Focusing our efforts on changing behaviours for a better Taranaki;
- Ensuring services and education are equally accessible to everyone including the rural, minority and lower socio-economic communities;
- Ensuring waste services in the region enable resilience, reduce emissions and enhance the natural environment.

Obtaining reliable data on waste and material management across the region will be key to informing our future planning and measuring our transition to a circular economy.

#### Part 3

# E Ahu ana Mātou ki Hea? Where do we want to be?

This section summarises where we would like to be in the future in relation to waste (Zero Waste to Landfill 2050), based on what the community told us was important. In collaboration with mana whenua, guiding principles have also been developed incorporating a te ao Māori view.

#### Ngā Kōrero mai a te Hapori **What our community told us**

The councils have collaborated regionally to engage with our communities on what the future could look like for the region in relation to waste management and minimisation. workshops in this location Workshops around Taranaki Regional surveys Virtual Workshops 2715 Statements captured from Taranaki communities In developing the Plan, our community proposed 356 vision (see figures, 14, 15) statements (Figure 14 above) and a range of options to reach our vision, with the diverse needs of communities reflected in Figure 15 (next page).

People engaged with over workshops and surveys

#### He Anga Rautaki

#### Strategic Framework

The future that we would like to see for waste is driven by a vision and goals framework.

Five key drivers have been considered in developing our future direction.

- 1. South Taranaki's strategic direction;
- 2. Regional strategic direction;
- Te ao Māori;
- 4. Te Rautaki Para Waste Strategy 2023; and
- 5. Circular economy principles

Building on the visions, goals and objectives set out in the previous plans, a review of where the community wanted our region to be in the future was undertaken. The framework has been expanded to align with Te Ao Māori (Māori World View) by including overarching guiding principles developed with feedback from Taranaki Whānau Whānui (the nine Iwi of Taranaki).

South Taranaki's vision for this plan is – Zero Waste to Landfill 2050.

Our guiding principles and associated values underpin our desired outcomes and what we want to achieve in the next six years, our goals and objectives

#### **Guiding Principles**

#### **Empowering Partnerships**

is a foundational principle in standing up a shared community vision and values. As a community, our efforts will be guided by the principles of partnership, participation and protection as outlined in Te Tiriti o Waitangi.

#### Responsibility

Waste is the responsibility of us all. We encourage industries and consumers to consider temporal, social, and ecological limitations while prioritising the preservation of our planet.

#### Taiao Ora Tangata Ora

Taiao Ora Tangata Ora refers to the health and well-being of the natural environment. It acknowledges our actions and decisions have a direct impact on the environment, and the state of the environment also effects our physical, spiritual, mental and emotional health.

#### **Connectedness**

Connectedness is a powerful tool for waste minimisation, helping to create sustainable practices that promote environmental and human health.

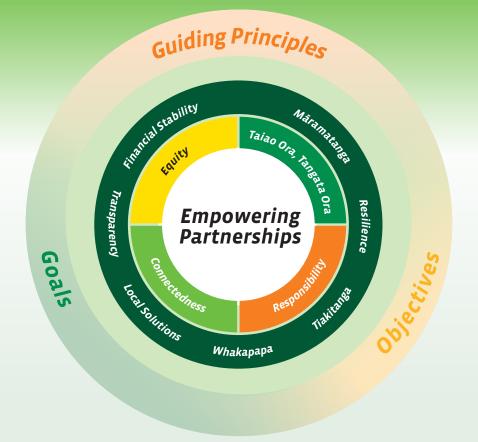

#### **Equity**

We aim to ensure the costs and benefits of change are distributed equally among communities and across generations. This means that waste reduction initiatives should not disproportionately burden certain groups of people or communities, such as low-income or marginalised populations.

#### Zero Waste to Landfill 2050

Empowering Taranaki to Achieve a Circular Economy

#### Goals

Provide local solutions that make the most out of materials

Provide methods to help people use materials wisely.

Enhance the environment through low waste and low emissions solutions

#### **Objectives**

Promote Innovation and Leadership

Encourage Collaboration and Partnerships

Facilitate Behaviour Change

Deliver Accessible Facilities and Services

The full guiding principles model and the explanation for all terms can be found in appendix 1.

#### He Anga Rautaki

#### Targets and measurement

Targets for Taranaki reflect the targets set out in the Te rautaki para Aotearoa / New Zealand Waste Strategy and have been adjusted to reflect the local context.

	:	STDC	Re	gional
Targets	Baseline 21/22	Target	Baseline 21/22	Target
Waste generation <sup>3</sup>				
Reduce the amount of material entering the waste management system by 10% per person	0.32	10% by 2029		10% by 2029
Waste to Landfill				
Reduce the total waste tonnes per capita going to the regional landfill (T/capita/annum)	0.292	30% by 2029		30% by 2029
Reduce the total waste tonnes per household going to landfill from the Council kerbside collection (T/hh/year)	0.24	5% per year		< 300kg (-10kg each year)
Diversion of Waste				
Increase the amount of household waste diverted to recycling (Council provided kerbside collection only).	37%	<ul><li>30% by July 2026</li><li>40% by July 2028</li><li>50% by July 2030</li></ul>		<ul><li>30% by July 2026</li><li>40% by July 2028</li><li>50% by July 2030</li></ul>
Reduce contamination of Council provided kerbside recycling delivered to the Material Recovery Facility	(Current 12-mth average) 21.45%	15% by 2029/ 2% reduction per year		15% by 2030/ 2% reduction per year
Waste Emissions				
Increase organics capture at transfer station and kerbside	20.1%	5% per year		
Customer Satisfaction				
Percentage of community satisfied with the solid waste service.	81%	>90%		N/A
Total number of complaints received about the Council's solid waste service	<8	<8		N/A
Equity and Access				
Increase awareness and use of council services (baseline data to come)	N/A	N/A	34% Awareness and 19% useage	5% increase in awareness and use in biennial survey

	STDC		Regional	
Targets	Baseline 21/22	Target	Baseline 21/22	Target
Enhance the environment				
Maintain 100 per cent compliance with resource consent conditions for Council-operated solid waste district facilities	100% compliance	100% compliance	100% compliance	100% compliance
Community Engagement				
Three annual education campaigns on waste minimisation	3	3	3	3
Waste community engagement survey completed every two years	N/A	N/A	3	1

 ${\it Council data used for base line as there is limited data on district and region-wide waste generation.}$ 

#### Part 4

#### Te Tautoko ā-Pūtea i te Mahaere **Funding the Plan**

This section outlines how the plan will be funded, including how any waste levy funding will be distributed.

#### Te Tautoko ā-Pūtea i te Mahaere

#### **Funding the Plan**

In 2022/23, the cost of the Council's waste management and minimisation services was \$5.5 million, funded by user fees, waste levies and rates. Over the next six years the cost of dealing with our waste is expected to increase considerably, mainly due to increased Government levies placed on all waste sent to landfill and increased costs for the kerbside collection service (e.g. fuel, etc). However, this also provides an increase in levy returns to councils that can be invested in new waste minimisation activities.

Waste services are funded through general rates, a targeted rate (kerbside collection), waste levies, and from user charges at transfer stations. Recycling and domestic volumes of hazardous waste are not charged to the user.

All waste levy funding received by the Council is spent on waste minimisation activities, supporting contract costs or as infrastructure capital. The Council has flexibility in the timing and way waste levy funds are utilised. Funds can be pooled with other councils or pooled for several years to use for infrastructure development, as long as this use is provided for and explained in the Plan.

The Council may make grants or financial advances to any person, organisation, group, or body of people for the purpose of promoting or achieving waste management and minimisation (section 47 of the Act). In deciding whether to fund such proposals, the Council will consider the following criteria:

- The benefits of a proposal in relation to present and future needs of the District;
- The extent to which the benefits of the proposal are public or private;
- The extent to which a proposal contributes to goals and objectives set out in this Plan;

- The cost of the proposal, including funding sources;
- The effects the proposal may have on any existing waste minimisation services; facilities or activities, either provided by the Council or by others.

A grant or financial advance may be made subject to any terms or conditions that the Council thinks fit, including that an advance of money is interest free.

The Council may waive waste disposal (landfill, collection) charges, in full or in part, in certain circumstances. In deciding whether to waive charges, the Council must be satisfied that:

- Waiving charges will not significantly prejudice achieving the Plan's objectives;
- The charges are clearly unreasonable or inappropriate in the particular case;
- The benefits of waiving charges in relation to providing for community events or needs in the District outweigh the costs;
- There is no potential for adverse effects on the environment or public health.

Any waiving of waste disposal charges may be made subject to any terms or conditions that the Council thinks fit.

#### Part 5

# Te Aroturuki, te Arotake me te Pūrongo i ngā Kokenga Monitoring, evaluating, and reporting progress

Ensuring we deliver on our Plan is an important part of our journey to Zero Waste to Landfill and a more circular economy. This section details how we will measure the effectiveness of our Plan, and what data we will collect.

#### Te Aroturuki, te Arotake i te mahere

## Monitoring and evaluating the Plan

The Council will monitor and report on the implementation of the Plan. Monitoring will address the targets set out in this Plan and the effectiveness of the action plan. Monitoring will include:

- Quantity and composition of waste and captured materials;
- Origin of the waste;
- Monitoring of specific waste streams such as illegal dumping;
- Progress in capturing more reuse data;
- Effectiveness of actions in the Plan and progress towards the targets set;
- Compliance with legislative requirements;
- Better capture and reporting of circular economy activities and emissions generated from waste.

A full review of the Plan will be conducted by the Council at least six years after adopting the Plan or the last review. Any review of the Plan will be preceded by a Waste Assessment under section 51 of the Act. This Plan includes data and results of the regional waste assessment undertaken in 2021/22.

# Te Mahere Whakatinana Action Plan

### Te Mahere Whakatinana

### **Action Plan**

This action plan outlines a six-year programme to work towards the vision and targets presented in this Waste Management and Minimisation Plan. Any significant changes to current levels of service will be incorporated into the Council's Long-Term Plan process and are subject to public consultation. The action plan has been designed to meet the requirements of the Waste Minimisation Act 2008 and the Local Government Act 2002, by including all practicable options to achieve the Council's waste minimisation objectives. These options have been assessed in terms of their future social, economic, environmental, and cultural impacts on the District and its residents, and alignment with both Te rautaki para Aotearoa / New Zealand Waste Strategy.

There are four areas of focus that will help South Taranaki move towards a circular economy and Zero Waste to Landfill vision.

- National policy and work programme setting up Taranaki well for the future changes
- 2. Data improving planning and transparency through reporting about our waste
- 3. Key waste streams and material capture
- 4. Circular economy

For each focus area, the action plan presents:

- Specific actions to address the issue, including whether it is a new or existing action;
- Whether the action is South Taranaki specific or a regional action;
- How the action aligns with the strategic framework;
- Council's intended role;
- Funding source, such as whether actions will be funded through rates, user fees and waste levies;
- Position on the waste hierarchy.

These actions are derived from priority options identified in the Waste Assessment and community consultation, which have been developed to address the vision of the Plan and key issues and gaps.

Table 4 Issues and Gaps

## National Policy and Work Programme

Setting up Taranaki well for the future

### Data

Improve planning and transparency through reporting about our waste

### Key Waste Streams and Material Capture

- Commercial waste including construction and demolition material
- Organics
- Rural waste services
- •Illegal dumping
- Increase effectiveness/use of collection and resource recovery services, and reduce contamination in recycling

### Circular Economy

- Reuse and repair culture embedded in the region
- Influence behaviour around what we can consume and increasing recovery of materials
- Supply chain and community engagement and action in circular economy
- Reduce carbon emissions alongside waste reduction plan adaptation to climate change

### Āpitihanga Appendices

### Appendix 1

### Ngā Mātāpono, ngā Uara me ngā Whakataunga

### **Guiding Principles, Values and Outcomes**

- \* Māramatanga Acquisition of knowledge and wisdom through learning and experience to develop a range of solutions to meet the needs of households, businesses, and communities.
- \*\*Tiakitanga Our inherited rights and obligations to ensure the mauri of the environment and community resources are healthy and strong.
- \*\*\*Whakapapa Ancestral lineage and interconnectedness between people and the nature. It traces the origins of the universe and explains our place in the world.

### **Guiding Principles**

### **Empowering Partnerships**

Empowering Partnerships: is a foundational principle in standing up a shared community vision and values. As a community, our efforts will be guided by the principles of partnership, participation and protection as outlined in Te Tiriti o Waitangi.

In the context of waste minimisation, Te Tiriti o Waitangi recognises the importance of the relationship between Māori and their natural resources. It acknowledges Māori communities as kaitiaki (guardians) of the land, water, and air, and recognises an inherent responsibility to protect and preserve these resources for future generations. This means Māori are not only engaged in decision-making processes, but are active participants in ensuring waste minimisation efforts positively impact all communities.

### **Taiao Ora Tangata Ora**

Health and well-being of the natural environment, including the land, water, air, and all living beings.

This principle recognises that we are an integral part of the natural world and our well-being reflects the health of our environment. Our actions and decisions have a direct impact on the environment, and the state of the environment also affects our physical, spiritual, mental, and emotional health.

When we focus and respect our inter-connectedness with the environment and work towards sustainable practices that promote the health and well-being of the natural world we promote the systems for health and well-being within ourselves.

In practical terms, Taiao Ora Tangata Ora involves practices such as sustainable resource management, conservation efforts, and reduction of pollution. It also involves respecting and learning from indigenous knowledge and practices that have sustained the environment for generations.

### Connectedness

Can be a powerful tool for waste minimisation, helping to create sustainable practices that promote environmental and human health.

We acknowledge the inter-connectedness between systems, places and generations in order to think of waste and its relationship to other environmental, social and economic issues, including climate change, biodiversity and localism/regionalism.

This principle recognises that waste reduction is not just about reducing the amount of waste that is generated but also about understanding the impact that waste has on the environment and on human health.

Connectedness is the quality of our relationship within communities. It emphasises the need for humans to live in harmony with our environment, systems, homes and workplace.

By applying the principle of connectedness, waste reduction efforts can be designed to address the root causes of waste generation and to promote sustainable practices that minimise waste. For example, waste reduction efforts can focus on reducing the use of single-use products, promoting recycling and composting, and encouraging the use of renewable resources.

### Responsibility

Waste is the responsibility of us all.

We encourage industries and consumers to take into account temporal, social and ecological boundaries, choosing to respect our planet's limits.

We consider how the social situation of individuals, whanau, hapū, iwi and communities, and their locations- rural and urban affect their perspectives.

Enable people, businesses and organisations and sectors to do the right thing, by improving systems, services and information.

### **Equity**

We aim to ensure the costs and benefits of change are distributed equally among communities and across generations.

We recognise equity is an important guiding principle in waste minimisation because it ensures that the benefits and costs of waste reduction efforts are distributed fairly among all members of society. This means that waste reduction initiatives should not disproportionately burden certain groups of people or communities, such as low-income or marginalized populations.

We recognise the unique perspectives, needs and approaches facing different local communities, businesses, hapū, iwi and whanau.

### **Values**

### Whakapapa

- Whakapapa provides a framework for managing our environmental and cultural resources.
- We value the perspective that we are all interconnected; we are linked through our genealogies, our relationships with each other, and our inseparable ties with all living and non-living entities with whom we share this planet.

### **Tiakitanga**

- Tiakitanga frames our intergenerational rights and responsibility to ensure the mauri of the environment and community resources are healthy and strong, and the life-supporting capacity of ecosystems is preserved.
- Kaitiakitanga is an active responsibility to preserve and protect people and the planet-today and for generations to come.

### **Local Solutions**

- Our local solutions, information, systems and processes- make the right choice the easy choice.
- We recognise that local solutions in waste minimisation can help to create more sustainable and resilient communities, reduce environmental impacts, and promote economic development.
- We value community-led development to form part of the circular economy and create new economic opportunities.
- Engaging communities in the planning and implementation of strategic local initiatives, providing education and training opportunities, and creating partnerships between community groups, government agencies, and other stakeholders create local solutions with greater buy in and movement toward behaviour change.

### **Transparency**

- Transparency is essential for creating a culture of sustainability and responsible waste management.
- We build trust and accountability by having transparent data and reporting, which can lead to greater collaboration and cooperation in waste minimisation efforts.
- We tell our Taranaki waste story to celebrate our resource recovery journey (reflecting on successes and lessons) in order to support a culture of excellence.
- When waste reduction efforts are transparent, it is easier to identify successes and champions, and areas where improvements can be made and to hold individuals and organisations accountable for their actions. This can help to ensure that waste reduction goals are met and that resources are used in the most efficient and effective way possible.

### **Financial Sustainability**

- Ensure our actions promote financial sustainability by encouraging diverse co-investment solutions to support long-term change.
- Develop innovative business models, new markets and more demand for circular solutions, and recycled materials.
- We encourage businesses to demonstrate their commitment to environmental and economic sustainability. By reducing waste, businesses can conserve resources, reduce pollution and greenhouse gas emissions, and save money on disposal and other costs.
- Strategic funding and investment needs to be prioritised to build local capability and capacity, to address local challenges and opportunities.

### Resilience

- A resilient waste management system is able to maintain its performance and effectiveness in the face of unforeseen challenges, while minimising waste generation and maximising resource recovery.
- Aim for Taranaki to become as self-sufficient at managing its own waste.
- We create opportunities to help build awareness of the circular economy to inform and inspire local communities to adopt circular practices.
- We encourage collaboration to strategically look at the entire value chain of products and services in Taranaki, to encourage a strong regional circular economy.
- We recognise that communities will be strengthened by common sense strategies that reduce the environmental impact of waste disposal and promote sustainable waste management practices.

### Māramatanga

- Māramatanga refers to the acquisition of knowledge and wisdom through learning and experience to develop a range of solutions to meet the needs of households, businesses and communities.
- We value knowledge in the pursuit of knowledge and understanding as an enabler of change.
- We are open to the insights shared by each other and appreciate the opportunity to deepen our understanding through events and activities that support a learning process.

### **Outcomes**

### **Circular Economy**

- The circular economy is an economic system that aims to keep resources in use for as long as possible, maximising their full value and minimising waste. This can be achieved through practices such as recycling, reusing, repairing, and remanufacturing.
- A circular economy supports designing products and processes with a focus on reducing waste and increasing resource efficiency. This can include implementing closed-loop systems where waste is used as a resource for new products or processes, encouraging the use of recycled materials, and promoting the sharing or leasing of products rather than ownership.
- By prioritising circular economy outcomes, local communities and businesses can not only reduce waste and environmental impact but also create new economic opportunities and increase resilience in the face of resource scarcity.

### **Community Ownership**

We value community ownership because it:

- Encourages responsibility and accountability with individuals, households, businesses and wider community.
- Promotes co-operation, coordination and collaboration in local neighbourhoods and communities- deepening connections and sustainable outcomes.
- Raises community leadership and empowerment.
- Promotes new ideas and strategies through the bottom-up approach.
- Responds to the needs of people of respective communities.
- Increases community participation.

### Low waste society

 A low waste society is achieved through a combination of approaches, including waste

- reduction, reuse, and recycling. These approaches help to minimise waste generation and ensure that the waste that is produced is managed in an environmentally friendly way.
- A low waste society targets: waste generation, waste disposal and waste emissions and complements a low emissions circular economy.
- Participation and cooperation of individuals, households, businesses, and governments are central to the success of achieving a low waste society.

### **Regenerative Outcomes**

- Regenerative practices help communities to become more resilient in the face of challenges such as climate change, natural disasters, and economic shocks.
- Regenerative practices can help to restore damaged ecosystems and improve biodiversity. This can lead to a healthier and more resilient natural environment.
- By reducing waste, we conserve resources such as energy, water, and raw materials. This can help to create a more sustainable and regenerative system.
- A circular economy frames waste as a resource that can be reused, recycled, or repurposed. This can lead to the creation of new products and services, and a reduction in the need for virgin materials.

### Collaboration

- This outcome refers to the result of effective collaboration among individuals or groups. Done well, this can lead to:
  - 1. improved relationships, increased trust, and better outcomes for all involved.
  - result in the creation of new ideas, products, or services that benefit the community as a whole.
  - 3. The pooling of resources to achieve more than they could on their own.
- Collaboration brings people with different skills, experiences, and perspectives together, leading

to innovative and creative solutions to community challenges.

- Collaboration encourages a positive sense of community and belonging. When people work together, they develop relationships and build trust, which can lead to stronger social connections and a greater sense of community.
- Collaborative efforts can also help to break down barriers and promote inclusivity, as people from different backgrounds and communities come together to work towards a shared goal.
- Collaboration is at the heart of building strong and resilient communities, promoting social connections and inclusivity, and achieving positive outcomes for all members of the community.

### **Environmental Revitalisation**

- The restoration of degraded ecosystems, improving air and water quality, reducing pollution, conserving biodiversity, and mitigating the impacts of climate change form part of natural climate solutions in resource recovery.
- Community involvement is a critical aspect of environmental revitalisation, as it fosters a sense of ownership and responsibility for the environment, and encourages individuals to take action to protect and restore it.
- The benefits of environmental revitalisation are numerous, including: improved health and well-being for residents, increased economic opportunities through sustainable development, and enhanced resilience to the impacts of climate change.
- Environmental revitalisation helps to strengthen social cohesion and foster a sense of community pride and identity.

### Appendix 2

### A Mātou Mahi kia puta mai ai he Ōhanga Āmiomio

### Our contribution to creating a circular economy

Council's intended role is to meet future forecast demand for the District, along with providing opportunities for those who reside, work, and use the District to manage their consumption as part of a circular economy.

We currently provide a significant proportion of the waste services in the district via a regional contract for kerbside and transfer station services. Delivering these services ensures that we provide for public health and give effect to the Waste Minimisation Act. We also provide and/or fund waste minimisation activities, including:

 Working with others, including community groups, iwi, the private sector, and the other councils in the region, to achieve waste management and minimisation goals.

- Investing in waste facilities.
- Distributing waste levy funds in support of waste management and minimisation goals.
- Educating the community in waste minimisation.
- Monitoring and measuring waste flows and information in order to inform planning and decision making. We intend to enforce our bylaws to improve data to this effect.
- Researching and considering implementation of new activities to divert waste from landfill.

It is intended that we will continue to build on these activities as outlined in the action plan provided in part 6 of this plan.

Figure 16 Council's role in the Taranaki circular economy

### **Collaboration** Leadership and advocacy Council can collaborate with other Councils, central Council can advocate for extended government, industry, community groups to identify product stewardship and align and maximise opportunities for recovery and procurement to the circular reprocessing. economy. Waste strategy and data Council can collect and share data that will help interested parties (industry, community groups)identify opportunities for reprocessing. Taranaki's Circular **Economy Policy** Council can introduce bylaws to promote waste minimisation. **Education** Council can educate on responsible consumption. **Collections** Council can support initiatives that promote Council can continue to repair and resale (i.e. community RRCs) invest in the collection of materials for the purpose Physical infrastructure of diversion. Council can continue to invest recycling drop off infrastructure and new reuse/repair/resale infrastructure.
